

Instructions to Install the Exerciser/Balance Bar on the ReboundAIR™

The Exercise/Balance Bar comes in five parts:

- the top handle
- two straight tubes
- two that connect to the legs of rebounder.

1. After setting up your ReboundAIR™, remove two rubber leg tips from any two legs that you choose to connect the Exercise/Balance Bar. Make sure you skip one leg in between the two legs
2. Slide the two tubes **D** and **E** on the two legs of the ReboundAIR™ and replace the rubber leg tips to the two legs.
3. Connect the straight tubes **B** and **C** to the tubes **D** and **E** that are attached to the rebounder. Notice that there are three sets of holes in the handle so that you can adjust the Balance Bar to three different heights.
4. Slide the handle **A** onto the two tubes until the small metal buttons snap into place.
5. Wing screws are attached to the bottom leg pieces and tighten against the legs of the rebounder. (Wing screws are in plastic bag taped to plastic sleeve of leg pieces).

It is normal for the Exercise/Balance Bar to be able to move back and forth.

If you have any questions, please call, 1-888-464-5867.
